

Education

Indian Institute of Technology, Madras	Chennai, Tamil Nadu
Bachelor of Science - Data Science and Applications	Sep 2023 - Present

Key Skills

Programming Languages: Python, SQL, Java Script, HTML5, CSS3

AI/ML Libraries: Scikit-learn, XGBoost, Hugging Face, Pandas, NumPy, Matplotlib, Seaborn, Plotly

AI/ML Frameworks: TensorFlow, Keras, PyTorch, LangChain, LangGraph, CrewAI, VectorDB

NLP Frameworks & Libraries: NLP, Text-Processing, Hugging Face, LangChain

Web Dev Frameworks:Vue JS, Streamlit, Flask Fast api, Mern Stack, Next JS

Tools: OpenAI API, Jupyter Notebook, Google Colab, VS Code, Git, Github, Docker, FastAPI,AWS, Postman, PostgreSQL, Claude, Codex

ML Deployment & MLOps : Model Deployment, Model Versioning, Model Monitoring, CI/CD Pipelines, Docker, Kubernetes, Kubeflow, MLflow, DVC, RESTful API Deployment.

Professional Experience

Trackleo Technologies Pvt. Ltd.	Hybrid
Data Scientist	Feb 2026 – Present
As a Founding AI Engineer, built a deep learning-based fundus image classification system for five retinal disease classes and collaborated directly with the CEO to design and launch the company's first AI-powered web platform.	
Skills: Data Science, Machine Learning, Deep Learning, Computer Vision, Medical Imaging, Python, SQL, FastAPI, Docker, MLflow, CI/CD, Model Deployment, Data Analysis, Visualization, Kubernetes.	
AtliQ Technology	Virtual
Data Scientist (Internship)	Dec 2025 – Jan 2026
Built a CNN and ResNet50-based fruit freshness classification system with a Streamlit web application, achieving 99.8% validation accuracy for real-time image-based predictions. The solution automated manual freshness inspection, reducing evaluation time from hours to minutes and significantly improving user productivity.	
Skills: Data Analysis, Machine Learning, Deep Learning, GenAI, NLP, Agentic AI.	
Sudha Gopalakrishnan Brain Centre (SGBC)	IIT Madras — Chennai
AI Developer (Internship)	Nov 2025
Built 11 MCP tools for 3D Slicer using Python, enabling natural language interaction for brain MRI visualization and analysis, making complex 3D image exploration faster and more intuitive. Streamlined clinical research workflows by significantly reducing the time required to view, navigate, and analyze brain scans.	
Skills: Medical Imaging, 3D Slicer, Headless Automation, Python, Docker, MCP Servers, Jupyter, Visualization, System Integration, GenAI Tools, Web Development, Fastapi.	
Web Karo India	Remote
AI Product Engineering Intern	Jan 2025 – Sep 2025
Built an AI-powered collaborative productivity platform end-to-end, integrating workspace management, Kanban, calendars, notes, whiteboards, AI assistants, voice commands, real-time collaboration, and intelligent workflow automation into a single application. Simplified users' workflows by replacing multiple productivity tools and websites with one unified platform, enabling a seamless and efficient work experience.	
Skills: AI Product Engineering, Python, Machine Learning, Web Development, API Integration, Automation.	

Projects

Butterfly Director AI – Multi-Agent AI Film Planning Platform Code	Jun 2026
[Python, LangGraph, FastAPI, OpenAI, PostgreSQL, Neo4j, ChromaDB, Docker]	
Designed and developed a multi-agent AI platform that automates screenplay analysis, scene planning, shot generation, and production workflows using reasoning agents, RAG, and knowledge graphs. Enabled end-to-end film direction assistance by generating multiple creative video concepts in 1–2 minutes, reducing a process that typically takes hours into minutes through context-aware AI agent orchestration.	
Future Self AI – Predictive Decision Intelligence Platform Code	Jun 2026
[Next.js, TypeScript, React, Chrome Extension (MV3), PostgreSQL, Prisma, OpenAI, ChromaDB, TailwindCSS]	
Built an AI-powered Chrome extension that predicts the outcomes of important online decisions using multi-agent AI. It estimates regret probability, opportunity cost, and financial impact, helping users avoid impulsive choices and potentially save significant amounts of money.	
Facility Trust Desk – Healthcare Facility Intelligence Platform Code try it here	May 2026
[Python, FastAPI, LangChain, OpenAI, Qdrant, PostgreSQL, Streamlit, Docker]	
Developed an explainable AI platform that evaluates hospitals using RAG, trust scoring, evidence retrieval, and analytics to provide transparent healthcare recommendations. It empowers patients to make informed decisions, helping them choose the right hospital when timely, reliable guidance can be lifesaving.	

Certifications

- B.sc certificate (3rd year) – IIT Madras**
Issued on: May 2026 [Certificate Link](#)
- [Certifications](#)
